

THE GENESIS CONNECTION

John L. Wiester

Scientific Observation, Biblical Revelation The Origin of the Universe, Earth, Life and Humans

A war -- the creation-evolution controversy -- is being waged today in the classroom, the courts, and press. Advocates of both sides frequently do more to escalate the war than they do to understand each other.

Into this battle John Wiester brings a unique study that compares the entire creation account of Genesis 1 with the latest scientific evidence. The Genesis Connection draws upon impeccable and up-to-date scientific sources to present the major events in the history of the cosmos, the planet Earth, and life upon it.

Two important elements provide the basis for this study:

- The author focuses on the scientific evidence actually discovered as opposed to the theories of naturalistic causes to explain the evidence.
- The fundamental issue being addressed is not creation versus evolution, but a world view that starts with a creator versus one that has no creator.

After a thorough study ranging from the beginning of the universe in a Big Bang to the creation of human life, *The Genesis Connection* concludes that scientists are now furnishing substantial evidence that the biblical account of Genesis 1 is an accurate historical account of creation.

"This is a book that belongs in the home of every family that cares about education, and that believes 'all truth is God's truth' - even in a day when it is not clear just how to put it all together."

Peter Vibert, *New England Church Life*

"Excellent!"
